

What Is Claimed is:

1. An apparatus for mounting an appliance to a support surface comprising:

a first base and a second base;

said first base having a chamber and at least one keyway aperture;

said second base sized to substantially cover said chamber and said at least one keyway; and

at least one locking member on said second base positioned to releasably engage said keyway.

2. The apparatus of claim 1 further including a substantially continuous rim.

3. The apparatus of claim 1 wherein said first base includes a plurality of keyways and said second base includes a plurality of locking members which releasably engage said keyways.

4. An appliance mounting apparatus comprising:

a first base having a plurality of side walls forming a chamber;

an aperture in said in said chamber sized to accommodate an electrical outlet;

oppositely located concave sections on said first base, at least one keyway located on each of said concave sections;

a second base sized to substantially cover said chamber and said keyways;
a plurality of locking members positioned on said second base to releasably engage said keyways;

said concave sections define channels having opposing ends and which are sized to receive a head portion of said locking member;

one end of each said channel blocked by stops; and

said stops and sidewalls form a substantially continuous rim.

5. An appliance mounting apparatus comprising:

a first base having a plurality of side walls forming a chamber;

an aperture in said in said chamber sized to accommodate an electrical outlet;

oppositely located inwardly facing flanges on said first base, at least one keyway located on each of said flanges;

a second base sized to substantially cover said chamber and said keyways;
and

a plurality of locking members positioned on said second base to releasably engage said keyways.

6. The apparatus of claim 5 further including a substantially continuous rim.
